

Abstract

RECORDING AND PLAYING BACK DEVICE, STORAGE DEVICE, COMPUTER
DEVICE, DATA PROCESSING METHOD, AND PROGRAM SENDING DEVICE

If the number of retries made before data is read successfully reaches or exceeds a predetermined number, the data is saved in spare sectors SS and then data sectors DS which originally stored the data are overwritten. Furthermore, both when data is saved in spare sectors SS and when data is written over data sectors DS, appropriate pointer information in RDM table stored in a reserved area RA including a nonvolatile memory is updated as required.
